

ENERGY MANAGEMENT POLICY

As SİDE STAR HOTELS, within the scope of ISO 50001 Energy Management System;

- Creating an Energy Management System in line with TS EN ISO 50001 Standard
- To work in compliance with all legal and international legislation on energy efficiency.
- Establishment and implementation of all necessary procedures in procurement processes, design, investment and production stages with a focus on energy efficiency
- Ensuring the supply of products, equipment and parts with high performance in energy efficiency,
- Effective communication with staff, guests, suppliers and all other stakeholders to raise awareness on energy efficiency,
- The power of correct methods for effective resource management in the production and consumption stages of energy,
- Minimizing resource loss through energy saving and savings savings
- Protecting the environment by minimizing the carbon footprint in activities
- Regular recording and monitoring of energy data, setting targets for reducing consumption, preventing energy losses and continuously improving energy performance
- Allocating resources to support design activities,
- Creating awareness of energy saving and energy efficiency by providing training to employees, raising awareness about achieving carbon footprint targets and protecting the environment within the framework of company policy,
- WE COMMIT to the necessary allocation for renewable energy
